DETAILED ACTION

1. Claim 1 is pending in the application.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

4. The term "thin" in claim 1 is a relative term which renders the claim indefinite. The term "thin" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably appraised of the scope of the invention. It is unclear what is considered to be a thin polymer membrane.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Wardlaw et al. (U.S. Patent No. 4,204,015).

Art Unit: 1772

Regarding Applicant's claim 1, Wardlaw discloses thermal membrane comprising a thin polymer membrane (*intermediate layer, col. 2, lines 25-29*) that insulate a heat transfer material (*windowpane structure, col. 1, lines 5-9*) therewith a plurality of through holes (*perforations, col. 2, line 41*) in a predetermined pattern (*figure 1*) and thermal condition and insulating material (*gas, col. 2, line 6*) filling a predetermined pattern of at least a hole to provide increased thermal conductivity to the thermal membrane (*col. 2, lines 3-8*).
